

Energy Policy

Reducing Our Energy Footprint

Our business as a manufacturer of cement and construction materials is energy intensive. AfriSam strives to reduce its energy consumption and cost, to promote long-term environmental and economic business sustainability.

We aim to achieve energy reduction by focusing on Creating Concrete Possibilities.

- C** Continuously improve energy efficiency and conservation for all forms of energy used.
- O** Optimise the use of energy efficient equipment, tools and supporting systems, and promote innovative ideas to optimise energy consumption.
- N** New and existing legal and other requirements regarding energy use, efficiency and consumption to be maintained.
- C** CAPEX investment as required to implement energy efficiency will be promoted for upgrades as well as new projects.
- R** Reduce energy consumption by improving energy intensity per product and utilisation of alternative energy sources.
- E** Ensure the availability of resources to achieve our objectives and targets.
- T** Training and awareness on energy efficiency will be promoted.
- E** Effective and efficient procurement of energy efficient products and services.
